# CellBoard

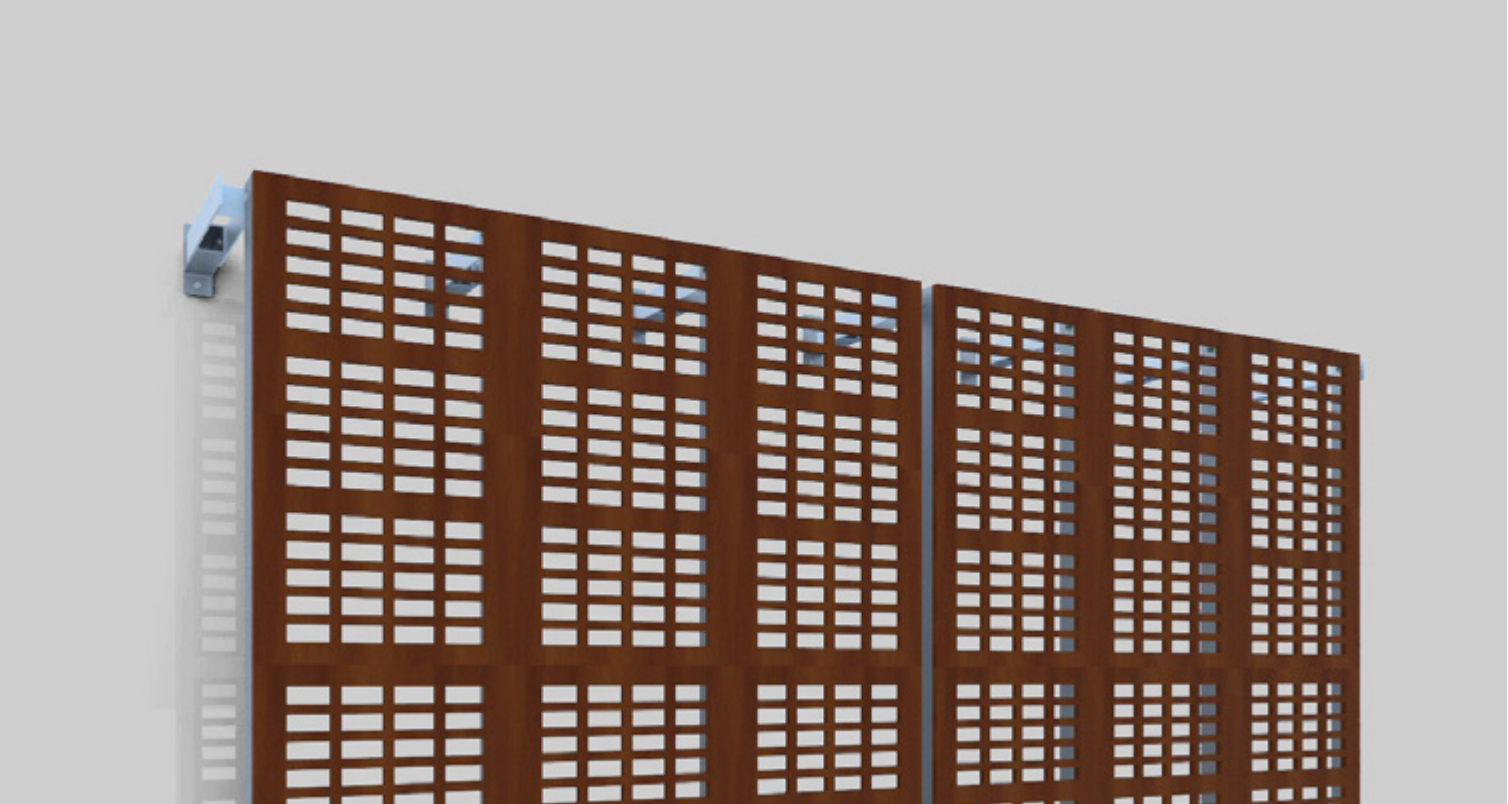

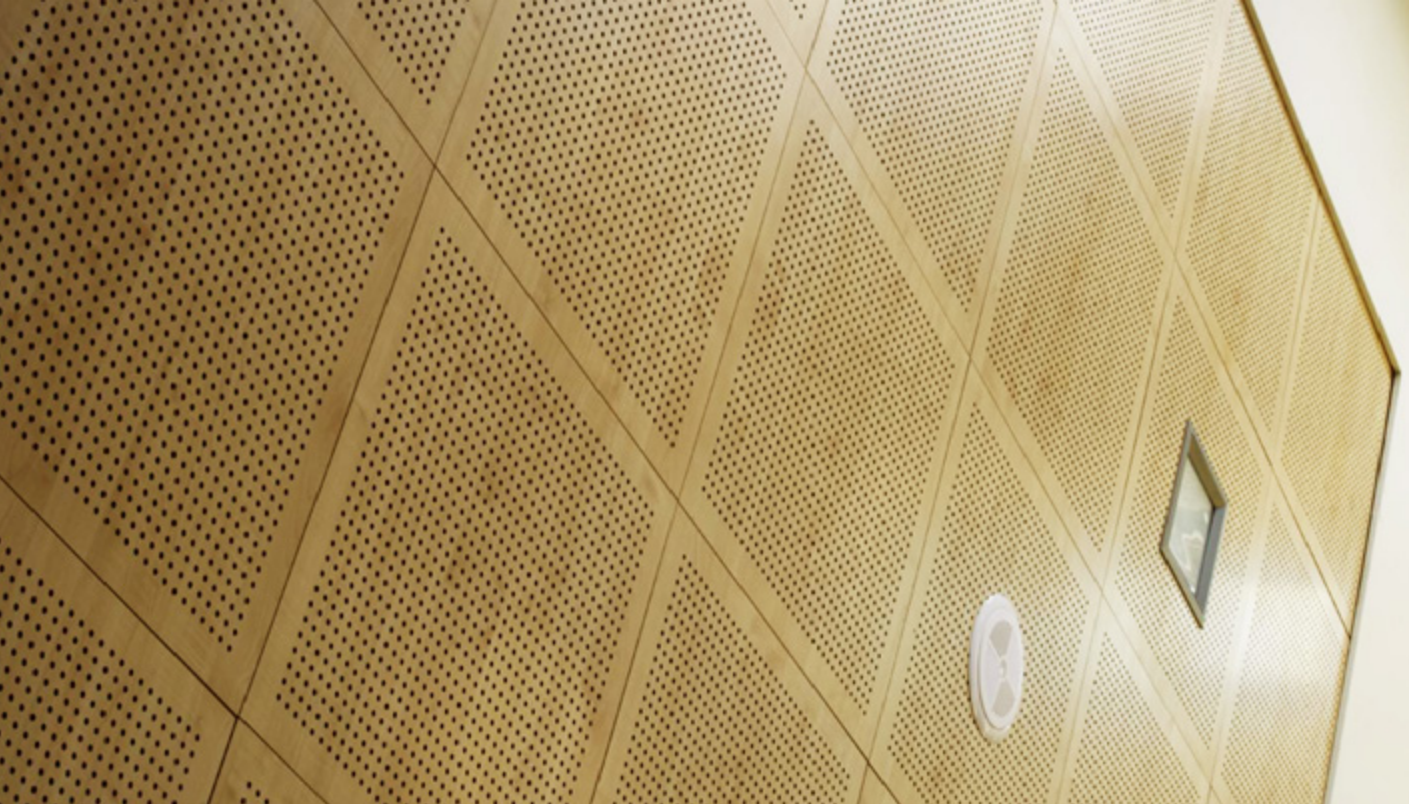

# CellBoard

CellBoard panels are ideal for building facades, cladding, decorative feature panels, awnings and soffit cladding, giving designers, architects and builders so many flexible design options to work with. The unique design of CellBoard panels makes them durable and lightweight while their structural ability delivers exceptionally high performance. This makes CellBoard ideally suited for use on high-rise buildings where a large span of sub-frame support for the façade cladding is essential.

The natural properties of “CellBoard” panels ensures they are colour fast, low maintenance, weatherproof and above all, non-combustible.

## sizes

thickness	12mm	25mm
