

InnoShade

InnoShade

SOL'ART Louvre

InnoShade SOL'ART louvre systems are architecturally designed and developed to provide solar shading and control through fixed and manually or motorised operable systems.

Creating striking architectural facades that are highly functional in providing privacy, light and solar control are now easily achievable with the InnoShade SOL'ART louvres for both commercial and residential applications.

SOL'ART Louvre Fixed

Fixed blade systems can be set at a predetermined angle dependent on the application.

SOL'ART Louvre Operable - Manual

Manually operable blade systems allow manual adjustment for privacy, light and solar control.

SOL'ART Louvre Operable - Motorised

Motorised operable blade systems allow for the ultimate ease and control, either via a switch, remote or fully automated as part of a building management system.

* Guide only, span based on reinforced section (with aluminium inserts) and is dependent on region and wind load.

The tonal shading, colouration and graining variations add to the architectural character and overall visual appearance of the finished installation.

SOL'ART Opening Roof

SOL'ART's Opening Roof is perfect for all outdoor areas and spaces that require control and protection from the sun and other natural elements. Motorisation creates the ultimate ease and full control over the amount of light, shade, ventilation and airflow allowed in through the roof. And if connected to a rain sensor, the SOL'ART Opening Roof will automatically close when the first drops of rain start to fall, protecting your guests and your furniture and ensuring the outdoor festivities can continue without disruption.
